

## PRODUCT BRIEF: 238778, 238779, 238809 & 238810

Designed for Freightliner trucks operating in the most demanding heavy-duty environments, these radiators deliver enhanced durability and cooling performance where standard designs can reach their limits. Built to outperform OE in extreme service, the fiber-reinforced plastic tanks feature extra-thick, integrated mounting points molded directly into the tank corners. Heavy-wall solid steel bushing tubes and thick molded rubber isolators replace lighter OE mounting hardware for superior vibration control and long-term durability.

To further protect against vibration-related wear, the core utilizes an advanced two-row hourglass tube design that creates two support structures down the length of the core for exceptional strength and resistance to fin and tube fatigue in harsh operating conditions. (Northern's standard-duty options remain an excellent solution for typical operating conditions.)
