

Medium / Heavy Duty Truck RADIATORS

Since the very beginning copper and brass radiators have been a staple component of most cooling systems. Today you'll still find copper and brass radiators in a variety of industries and applications. But as manufacturing designs and technology have improved, "Plastic Tank/Aluminum Core" product has been and continues to be the original equipment industry standard as a quality replacement to the copper and brass product. In most applications they last longer, they're lighter, and cost less money!

In the Heavy Duty Truck market, Northern Radiator has offered you a choice of copper/brass as well as a plastic /aluminum radiator to various truck models. And where it makes sense we will continue to do so. However, it's very apparent that in many specific part numbers, applications and working environments, **Northern's plastic tank/aluminum radiator is far superior in its performance, longevity and customer satisfaction and has substantially fewer warranty situations.**

As the leader in the cooling industry it's Northern Radiator's obligation to provide you with only the highest quality product available for you to service your customer. The below listing shows the Northern plastic tank/aluminum core radiator that you should be selling, where you may have previously recommended a copper/brass product.

PART #	MAKE/MODEL without Frame	OEM #	PART # with Frame
